

U.S. Health 1975

□ Lower infant death rates and longer life expectancy as well as rising rates of venereal disease and higher medical costs are shown in a report on health in the United States in 1975 submitted to the Congress and the President by the Secretary of Health, Education, and Welfare (HEW).

□ Rates of infant deaths in the nation declined from 29.2 per 1,000 live births in 1950 to an estimated 16.5 in 1974. Over the same period, life expectancy at birth increased by nearly 4 years. The death rate for heart disease, the nation's major killer, is decreasing.

□ The report, "Health, United States, 1975," includes data on health care costs and financing, health resources and utilization, and health status. The data are from four HEW components—Health Resources Administration, Social Security Administration, Center for Disease Control, and Alcohol, Drug Abuse, and Mental Health Administration—as well as from other Federal and non-Federal sources.

□ Over the past 10 years, the report shows, many of the striking differentials in the use of health services by people at different income levels have been substantially reduced. In 1964, 28 percent of the poor had not seen a physician within 2 years, in contrast with 17 percent in 1974. For those who were not poor, the respective proportions were 18 and 13 percent.

□ But health care still takes a disproportionate share of the income of the poor. In families with incomes under \$2,000, a group with a high proportion of elderly persons who have high health expenses, about 13 percent of the family income is spent for health care. In families with incomes of \$7,500 or more, less than 4 percent of the income is used for health care.

□ The report also shows a marked and continuing decline in the resident population of State and county mental hospitals—the result of a shift in treatment to outpatient facilities. In 1955 only 23 percent of the treatment episodes in mental health facilities were in outpatient facilities. In 1973, 65 percent of the episodes were outpatient.

□ Health care has been taking an increasing share of the nation's total production of goods and services. By 1975 national health expenditures totaled approximately \$118 billion or 8.3 percent of the gross national product. In 1950 the expenditures were \$12.6 billion and less than 5 percent of the GNP. The change is due primarily to inflation and to increased use of services, including new and costly techniques of care.

□ Sources of payment of costs have shifted markedly. In 1950 more than two-thirds of personal health care costs were paid directly by the patient; in 1974 the patient's share was one-third of the total.

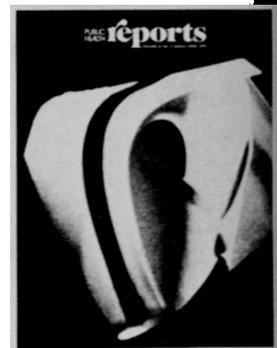

□ The nation's supply of physicians has been growing far more rapidly than the population. Overall, the number of persons per physician decreased from 653 to 562 between 1965 and 1973, through increases in the number of medical school graduates and the licensing of foreign-trained physicians.

□ The geographic distribution of physicians is uneven. There are more than 1,000 physicians for each practicing physician in States with more than 1,000 persons for each practicing physician and States with just over 400. There are approximately 500 persons for each non-Federal physician in the largest metropolitan areas and more than 2,000 in nonmetropolitan counties. The distribution is even more disparate for medical specialists. Dentists, nurses, and other health professionals are also concentrated in urban areas.

□ Copies of the report, the first in an annual series required by Public Law 93-353, the Health Services Research, Health Statistics and Medical Libraries Act of 1974, are available from the National Center for Health Statistics, 5600 Fishers Lane, Rockville, MD 20852.

Health Resources Administration

Cover—Three papers in this issue focus on nursing. Dr. Donald W. Simble describes a method for budgeting rationally for nursing services, a major financial concern to hospitals (p. 118). Phyllis Combs examines outcomes of referrals from a Veterans hospital to community nursing services (p. 127). Thomas W. Dobson and coworkers profile a typical nurse-associate training program in a survey of U.S. programs (p. 127).

White House Conference on the Handicapped

■ A White House Conference on Handicapped Individuals, which is designed to assess the problems those persons face, make the nation more aware of those problems, and which, it is hoped, will generate legislative and administrative action, is scheduled for December 1976.

Conferences in each of the States and Territories will precede the national conference and set the agenda for it. Both the State and national meetings are authorized by Public Law 93-615, which provides \$25,000 for each State and Territory in the conference and approximately \$2 million for the national conference. Administrative responsibility for the national conference rests with the Department of Health, Education, and Welfare and with a national planning and advisory council.

In announcing the White House conference, President Ford pointed out that there are more than 7 million children and 28 million adults in America with physical or mental handicaps. The President urged all Americans to support and participate actively in "this great human endeavor" which will "focus attention on the needs of our handicapped citizens."

Public Law 93-615 also required the appointment of a council—whose members have already been named by HEW Secretary David Mathews—to help plan and conduct the White House conference and to serve in an advisory capacity in formulating issue papers. Chairing the 28-member council is Dr. Henry Viscardi, Jr., a handicapped man who has had 25 years of experience in rehabilitation. The executive director, Jack F. Smith, former assistant dean of the Educational Extension, National Technical Institute for the Deaf, Rochester Institute of Technology, is also handicapped. Other council members include educators, rehabilitation specialists, medical personnel, social workers, Government officials, families of handicapped persons, and handicapped "consumers." At least half of the delegates to the White House conference will be handicapped, and handicapped persons will participate in every phase of the meeting.

education notes

Graduate Summer Session in Epidemiology at University of Minnesota. The Eleventh Graduate Summer Session in Epidemiology will be held at the University of Minnesota in Minneapolis from June 20 to July 10, 1976.

The session, designed primarily for medical school teachers, will offer, in addition to two basic courses in the fundamentals of epidemiology and biostatistics, several other courses previously offered and two new courses on the epidemiology of nutrition and nutritional abnormalities and the epidemiology of occupational hazards.

Tuition for the session is \$400, and special rates for food and dormitory lodging have been arranged. Further information is available from Dr. Leonard M. Schuman, Director, Graduate Summer Session in Epidemiology, University of Minnesota School of Public Health, A1-117 Unit A, Health Sciences Building, Minneapolis, Minn. 55455.

International Conference on Scabies and Pediculosis. An International Conference on Scabies and Pediculosis will be held May 22-23, 1976, at the University of Minnesota's medical school in Minneapolis.

The conference was developed under the auspices of the National Program for Dermatology, American Academy of Dermatology. It is partially supported by the National Institutes of Health and cosponsored by the Center for Disease Control, American Medical Association, and the universities of Minnesota, Pennsylvania, and California at San Francisco.

The meeting will bring together current scientific and clinical information for physicians and other health care professionals concerned with the identification, treatment, and control of these parasitic conditions that are reaching epidemic proportions in many places.

Further information is available from Dr. Milton Orkin, Dr. Howard Maibach, or the Office of Continuing Medical Education, Box 293, Mayo Memorial Bldg., University of Minnesota, Minneapolis, Minn. 55455.

Health Executives Development Program. An intensive 2-week seminar, which will emphasize health policy and planning, international health care trends, and the development of selected managerial skills, will be held on the Ithaca campus of Cornell University June 20–July 3, 1976. The program will be open to hospital administrators, health planners, and executives of governmental health agencies and other health care organizations.

Among the 25 participating faculty members will be I. S. Falk, Community Health Care Center Plan, Inc., New Haven, Conn.; Dr. James Kimmey of James R. Kimmey & Associates, Inc., Madison, Wis.; Dr. Kenneth J. Williams of K. J. Williams Associates, Inc., Napa, Calif.; Dr. Vincent Navarro, School of Hygiene and Public Health, Johns Hopkins University; Dr. Thomas S. Szasz, Upstate Medical Center, Syracuse, N.Y.; Dr. Edmund D. Pellegrino, Board of Directors, Yale-New Haven Medical Center, Inc.; and Dr. Ernest Seward, School of Medicine and Dentistry, University of Rochester, N.Y. The resident faculty will be Douglas R. Brown and Roger M. Battistella of Cornell University and T. E. Chester of the University of Manchester, England.

Further information and application forms are available from Health Executives Development Program, Program of Hospital and Health Services Administration, Graduate School of Business and Public Administration, 319 Malott Hall, Cornell University, Ithaca, N.Y. 14853.

Graduate Summer Session of Statistics in the Health Sciences. The 18th annual Graduate Summer Session of Statistics in the Health Sciences will be held at the Harvard School of Public Health, Boston, July 12–August 20, 1976.

The courses, which will cover a wide range of academic and experience levels, will be offered to statisticians, epidemiologists, health science personnel, administrators, health planners, and other health workers who use quantitative data in decision making and problem solving. Among the subjects taught will be elementary and intermediate biostatistics, demography, sampling methods, actuarial statistics, analysis of categorical data, health facility statistics, research design, program evaluation, and design of experiments.

Further information is available from Dr. Jane Worcester, Department of Biostatistics, Harvard School of Public Health, 677 Huntington Ave., Boston, Mass. 02115.

International Symposium on Pediatric Cardiology. The cardiovascular problems of youths will be discussed at the Helen B. Taussig International Symposium on Pediatric Cardiology. The meeting, which is sponsored by Johns Hopkins University, American Academy of Pediatrics, and American Heart Association Committee on Cardiovascular Disease in the Young, will be held in Baltimore, Md., May 24–26, 1976.

The \$150 tuition will enable registrants to participate in sessions on the tetralogy of Fallot, rheumatic heart disease; hypertension and hyperlipidemia in the young; the sick infant—advances in medical management, advances in surgical techniques, and problems after surgery; society and the child with cardiovascular disease; cardiomyopathies—the international scene; car-

diomyopathies—new approaches to diagnosis and therapy; and the etiology of congenital heart disease.

For additional information, contact Glenn C. Rosenquist, MD, Symposium Director, CMSC 274, Johns Hopkins Hospital, Baltimore, Md. 21205 (telephone 301: 955-3611).

International conference on health education. The Ninth International Conference on Health Education will be held in Ottawa, Canada, August 29–September 3, 1976. The meeting, hosted by the Canadian Health Education Specialists Society as well as numerous official, professional, voluntary, and civic agencies, will focus on the theme of health education and health policy in the dynamics of development.

The conference will consist of a series of panel presentations, group discussions, simultaneous sessions, continuous film presentations, and contributed papers on a wide variety of topics. It should be of interest to policy planners, health educators, behavioral scientists, health and social development workers, and citizens interested in the advancement of health and social development through education.

Conference communications will be enhanced by the use of closed circuit television and a series of workshops demonstrating the use of audiovisual equipment and other communications media in health education. In addition, simultaneous translation of the sessions will be available in English, French, and Spanish.

Interested persons are urged to register before May 31, 1976, when fees will be \$100 Canadian for full-time participants and \$75 Canadian for an accompanying person or spouse. On June 1, 1976, fees will increase by \$25 Canadian.

Additional information and registration materials are available from Canada's Organizing Committee, IXth International Conference on Health Education, c/o Canadian Health Education Specialists Society, P.O. Box 2305, Station "D," Ottawa, Ontario, Canada, K1P 5K0.

Conference on skin health problems. The third conference on cutaneous toxicity, sponsored by the American Medical Association and the Society of Toxicology, Inc., is scheduled for May 17–18, 1976, in Washington, D.C. Among the subjects that experts in skin problems will discuss at the conference are the skin's susceptibility to harmful materials, the safety of products used on the skin, disease control in the hospital, the absorption of harmful materials through the skin, whether animal studies can be applied to humans, the potentials of substances used on the skin for causing cancer or birth defects, and possible harm to the skin from hair dyes.

For further information, write Department of Drugs, American Medical Association, 535 N. Dearborn St., Chicago, Ill. 60610.

Conference on industrial waste. The 31st annual Purdue Industrial Waste Conference is scheduled for May 4–6, 1976, at the Stewart Center, Purdue University. More than 100 papers on subjects relating to industrial waste treatment will be presented to more than 1,000 conference participants from industry, educational institutions, and government agencies.

More information and registration forms are available from Professor A. J. Steffen, Room 310, Civil Engineering Bldg., Purdue University, West Lafayette, Ind. 47907.

information for contributors

PUBLIC HEALTH REPORTS, published by the Health Resources Administration, welcomes from any source contributions of value to public health, health and medical care, and community medicine.

We are particularly interested in publishing scientific papers concerned with the delivery of health services and with the many facets of health care, as well as technical reports documenting studies and research efforts. We also seek papers on new programs, new projects, and new ideas, even when they are experimental in nature. We want to record the current happenings in the health field.

Our readers are practicing public health officials, community health practitioners, faculty and students in colleges where the health disciplines are taught, and workers in research institutions, hospitals, and community health organizations.

□
Tearsheets. In lieu of reprints, senior authors are provided with 50 to 100 sets of tearsheets after publication. Associate authors receive a smaller number.

□
Manuscript form. Authors will facilitate review if they submit four copies of their manuscripts. All copy should be typed double-spaced and each page should end with a completed paragraph. Each chart and table should be placed on a separate sheet of paper. References should follow the style used by PUBLIC HEALTH REPORTS. Footnotes should be worked into the text.

Authors are expected to recognize scientific contributions by those who have assisted them only if such contributions warrant mention in the text or in the paragraph identifying the authors. It is not the policy of PUBLIC HEALTH REPORTS to publish acknowledgements. More detailed instructions for potential contributors will be supplied on request.

□
Manuscript review. Most manuscripts submitted for publication are reviewed by technical experts, and authors are given the benefit of their comments before type is set. Authors also receive edited typescripts and galley proofs for approval. Authors are responsible for the accuracy and validity of all material, including tables, charts, and references.

PUBLIC HEALTH REPORTS publishes a synopsis, in lieu of a summary, of most technical reports. Authors are requested to submit with appropriate papers a synopsis of approximately 250 words. The staff will supply on request information on the preparation of synopses.

□
Secondary publication and indexing. Secondary publication of articles in PUBLIC HEALTH REPORTS is provided in various abstracting journals (Abstracts for Social Workers, Current Literature in Family Planning). Articles are also indexed in the annual Cumulated Index Medicus and monthly Index Medicus (National Library of Medicine), Engineering Index, Hospital Literature Index (American Hospital Association), Cumulative Index to Nursing Literature, American Statistics Index, and Medical Socioeconomic Research Sources (MEDSOC), as well as in the Institute for Scientific Information's Current Contents (Social and Behavioral Sciences, Life Sciences, and Physical & Chemical Sciences), Social Sciences Citation Index, and Science Citation Index.
